

IntelliGel Technology: specific delivery of thyroid hormone receptor β (TR β) agonist to the liver

Crosslinked polymers with unique features that include:

- Selective liver targeting via attachment of anionic group through OATP receptor
- Intracellular release of drug asset due to high glutathione levels

Differentiated therapeutic profile

- Increased potency: high drug loading in target tissue
- Increased safety: no systemic exposure of thyromimetic
- **IP filed – IntelliGel + TR β agonist**
